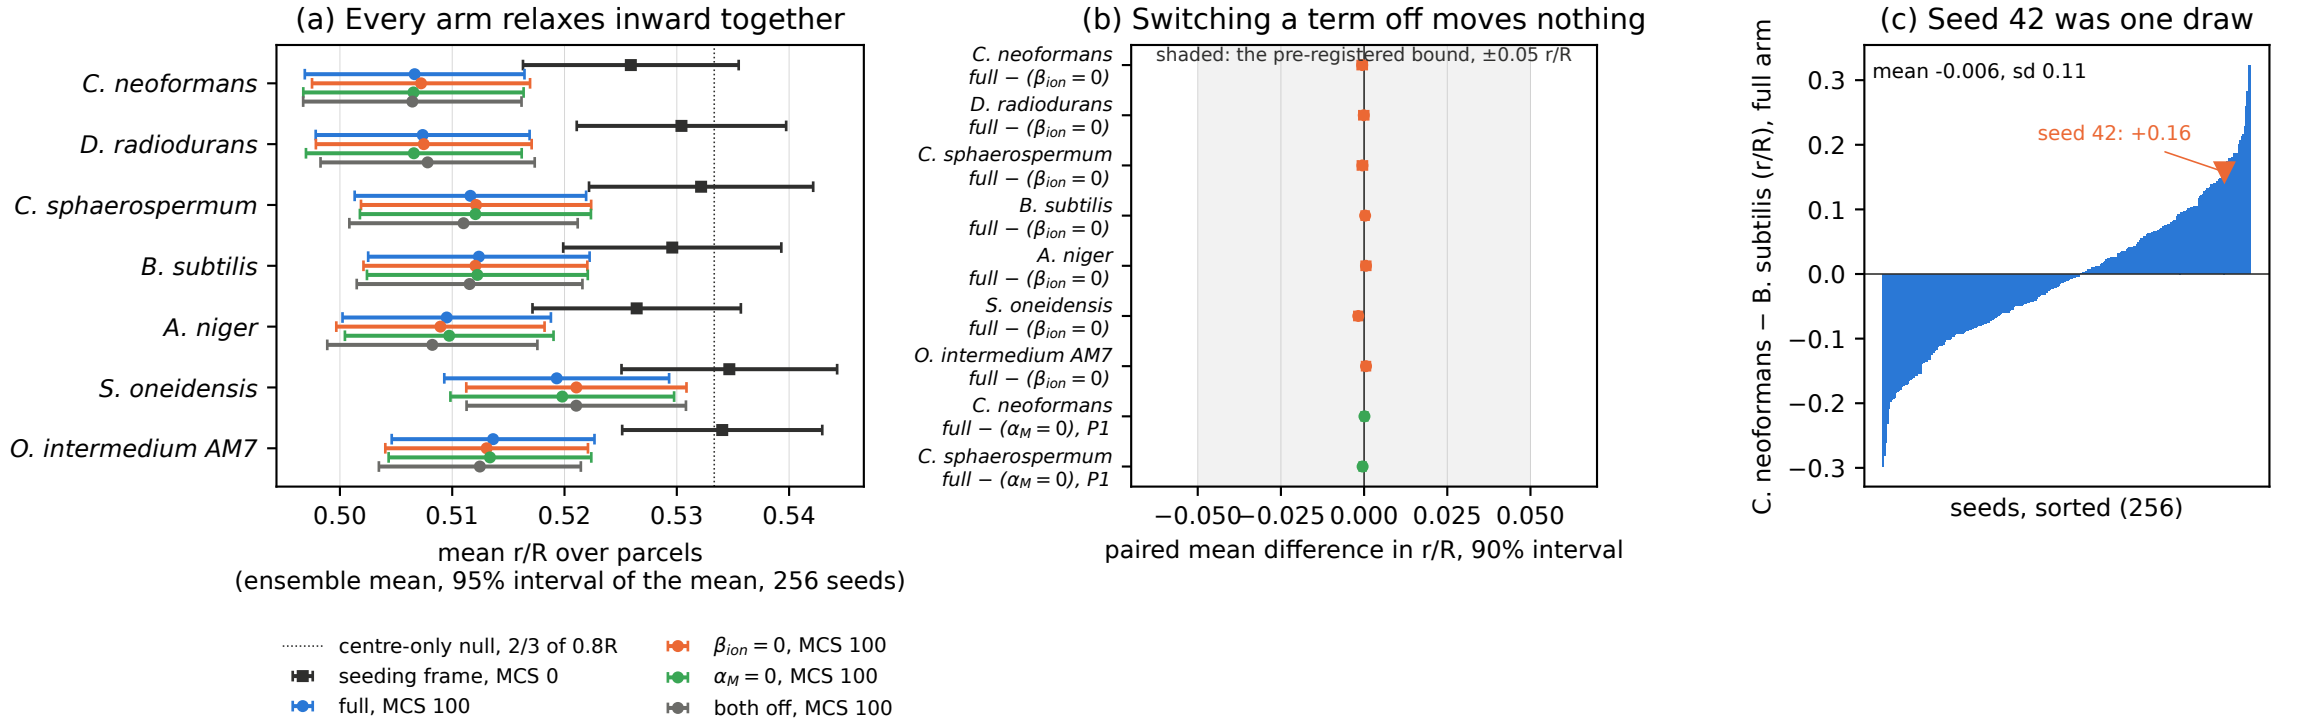
Neither radiation-derived term moves a parcel: four arms on the same 256 seeds

N = 40, six parcels per species, read at MCS 100, seeds 42 to 297; paired within seed; produced by julia 1.12.7 on x86_64-conda-linux-gnu



Lattice units divided by R = N/2. Arms zero CPMParams vectors only. A model output about the acceptance rule, with no organism in it.
