

Inert generic signal on the verified CPM trajectory

42 initial parcels | seed 42 | $N = 40$ | left-endpoint occupancy | no acceptance coupling

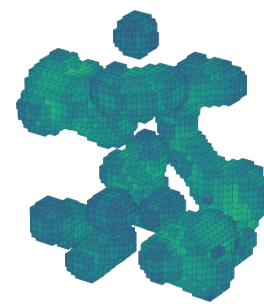

(a) MCS 0

(b) MCS 30

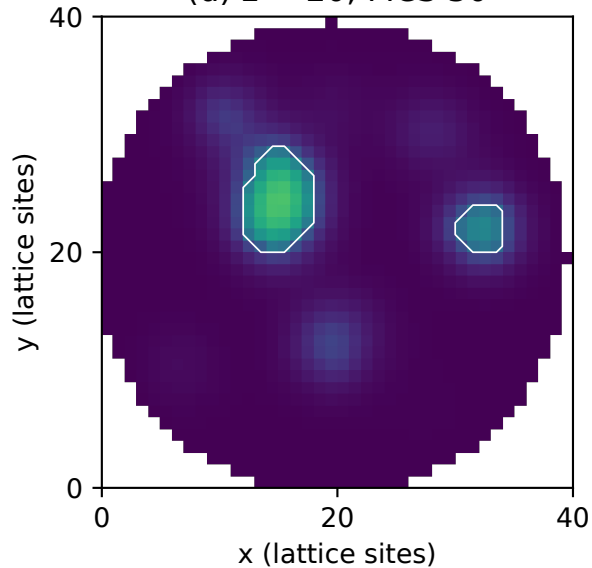

(c) MCS 100

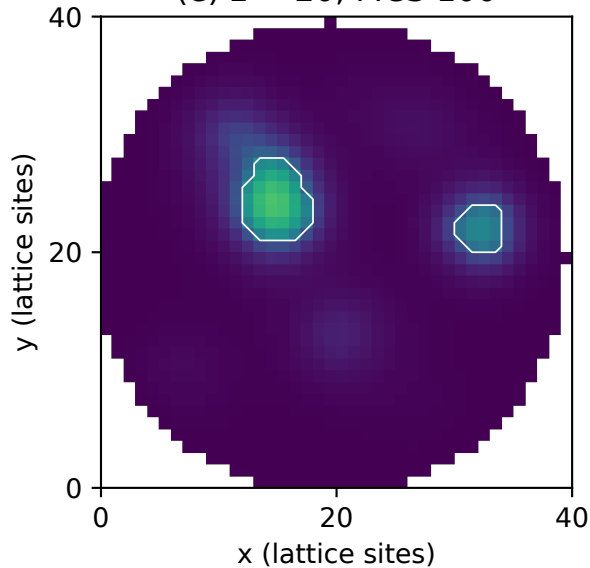

A (arbitrary signal units)

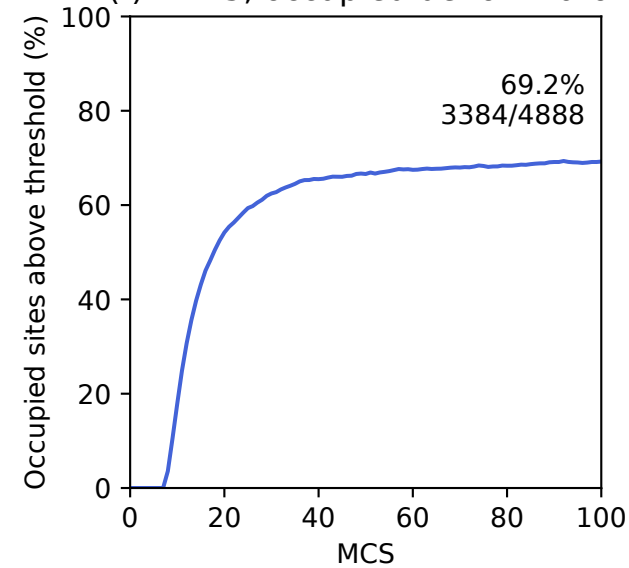

(d) $z = 20$, MCS 30

(e) $z = 20$, MCS 100

(f) $A \geq 5$, occupied denominator

Declared: $D = 0.2 \text{ sites}^2/\text{MCS}$; decay = $0.1/\text{MCS}$; production = 1 per occupied voxel/MCS; threshold = 5.

Zero signal at masked walls; no flux at outer cube faces. Plane contours mark occupied sites.

Raster voxel faces. Computational labels and an inert field; no membrane, EPS or biological QS-response inference.
